Important: never use children's personal information in AI tools.
Always ask permission from a parent, guardian or teacher when
you work with AI.

CONTENTS

Your journey through My Super-AI Team

Foreword

Welcome to your Super-AI Team

Chapters 1-4

What AI is, staying in charge, the ARIA method and the smart question

Chapters 5-8

Your AI team, safety, school learning, stories, art and imagination

Chapters 9-11

Checking facts, working with adults and using your AI compass

Travel Guide

Worksheets, checks, question cards and certificate

Travel On

FOREWORD

Hi there,

Maybe you have already heard of AI. Maybe you have already worked with it. Maybe you think: AI is useful. Or exciting. Or strange. Maybe you even think: one day AI will know everything better than I do.

This book is here to make one thing very clear: you stay in charge.

AI can help with words, ideas, pictures, explanations and plans. AI can give quick answers. Sometimes AI can even sound as if it is very wise. But AI is not a human being. It does not feel the way you do. It does not live the way you do. It does not know your heart. It can make mistakes. That is why you need to learn how to steer.

In this book, you will not only learn what AI is. You will mainly learn how to use it without losing yourself. You will learn to ask questions. You will learn to check. You will learn to stay safe. You will learn to create. And you will learn that smart technology only becomes truly smart when there is an awake human behind it.

That awake human is you.

Welcome to My Super-AI Team.

Let's begin.

For parents and teachers

This book is written for children, but it is also meant as a calm doorway into conversation. AI should not be secret, vague or scary. Children need clear language, safe boundaries and adults who keep looking together with them. The heart of this book is simple: AI may help, but the child keeps the steering wheel.

CHAPTER 1

WHAT IS AI, REALLY?

A helper that is not alive

AI means artificial intelligence. That sounds big and complicated, but for now you can remember it like this: AI is a computer program that is very good at patterns, language, images and information.

AI can act as if it is thinking along with you. It can begin a story, answer a question, make a list or explain an idea. Still, AI is not a person. It has no body, no dreams of its own, no conscience and no real feelings.

AI learns from examples. A lot of examples. Because of that, it can guess which answer will probably fit your question. Sometimes that answer is helpful. Sometimes it is half right. Sometimes it is wrong.

FIVE COMPARISONS

1. AI is like a flashlight:
it can light something up,
but you point the light.

2. AI is like a library:
there is a lot to find,
but you choose which
book to pick.

3. AI is like a bicycle:
it helps you move faster,
but you steer.

4. AI is like a toolbox:
it has useful tools inside,
but you build the work.

5. AI is like paint:
it adds color,
but you make the painting.

★ AI is also a bit like a car ★

If you have a car, you do not walk for miles just to prove you can do everything yourself. You use the car wisely so you can get where you need to go faster and more easily. AI is like that too. You do not have to avoid AI as if help is forbidden. You learn when it is useful, when you should steer yourself, and when you should slow down, check, or stop.

⊗ What AI is not ⊗

- ⊗ AI is not a friend who should know everything about you.
- ⊗ AI is not a teacher who is always right.
- ⊗ AI is not a parent who makes decisions for you.
- ⊗ AI is not a magic truth machine.
- ⊗ AI is not a replacement for your own mind.
