

Hi!

I'm Brian Brainteaser, and I'm an inventor.
In this LABORATORY, I create the most awesome
machines, devices, gadgets, and mechanisms.
From an automatic tooth brusher to a robot
that does your homework, you can find it here.
I'd love to show you all my inventions, from
small to big and from big to even bigger!

So . . . how about a tour?

I'll start with a small invention. This automatic tooth brusher brushes your teeth—yup, you guessed it!—automatically. You put the BACKBITER on your head, push the red button, and . . . that's it! The timer on top makes sure that you brush for exactly two minutes. Not shorter, because that's not good for your teeth. And not longer, because that's not good for your teeth either. By the way, you can easily build the BACKBITER yourself. The only thing you need is a sieve, toothbrushes, a timer, tape, sticks, straws, and rubber bands.

But I have bigger inventions!

HOW MANY TOOTHPASTE TUBES CAN YOU COUNT?
DO YOU SEE THE BIG MIRROR?
CAN YOU MAKE SOMETHING WITH TAPE,
STICKS, STRAWS, AND RUBBER BANDS?

Grocery list:

Sieve
Toothbrushes
Timer
Tape
Sticks
Straws
Rubber bands
